Mr. Steve Cinnamon  
USDI National Park Service  
Midwest Region  
1709 Jackson Street  
Omaha, NB 68102-2571

Dear Mr. Cinnamon:

A summary of the 1983-2006 gypsy moth trapping program at Hopewell Culture National Historical Site is enclosed for your information (Table 1). A map showing trap locations is also enclosed (Figure 1). The purpose of the trapping program is to monitor low-level gypsy moth populations and help determine when more intensive survey methods should be employed.

A total of 11 male gypsy moths were trapped at Hopewell Culture NHP in 2006. This is a decrease of 6 moths from what was trapped in 2005. Based on these results, gypsy moth populations will not have an impact on the forest resources at Hopewell Culture NHP in the immediate future. We would like to continue the trapping program at the same intensity in 2007.

Figure 2 shows the 2006 results of the Slow-the-Spread (STS) trapping program in Ohio. The insert on Figure 2 shows a zoomed-in-view of the STS results in the vicinity of Hopewell Culture NHP. For more information regarding the STS program, please visit <http://www.gmsts.org>.

For your information, our GM Digest website is located at <http://www.na.fs.fed.us/fhp/gm/index.shtm>. This site is a good resource for general gypsy moth information.

Thank you for your continued cooperation and if you have any questions regarding these results, please call Karen Felton at (304) 285-1556.

Sincerely,

JOHN W. HAZEL  
Field Representative  
Morgantown Field Office
